TREQSO

Manage your inventory with timely and accurate information

Typical Applications

TREQSO Inventory Module provides you with the tools you need to control and manage your inventory. Flexible and easy to use, the software is especially suited to:

- Job Shop / Manufacturing
- Wholesale / Retail Distribution

Functions

- Maintenance
- Reporting
- Status Inquiries

Benefits

Maintaining adequate stock to meet customer needs while minimizing inventory investment and carrying costs is one of the most difficult challenges faced by companies today. TREQSO Inventory Management assists you in meeting this challenge.

Minimum levels and reorder levels help keep adequate inventory levels. Turnover and flexible inventory reports let you identify and remedy slow or non-moving items quickly by branch, profit center, product line, etc.

The unique inventory layering feature maintains the cost of your existing inventory to the penny! Not just the last 3 or 4 purchase costs but the EXACT cost of your inventory. If your purchase costs fluctuate, this feature is invaluable in properly costing and accurately analyzing your margins.

Flexible inquiries save you time when researching inventory questions related to transfers, location, adjustments, commitments or historical use and purchasing. TREQSO lets your inventory specialists spend their time managing inventory; not mounds of paper.

Features

MAINTENANCE

Costing methods include FIFO, LIFO, and Average Cost.

Inventory can be tracked by serial number and lot.

Both the landed and general ledger (actual) cost of each item is maintained.

Each item can store up to 5 different units of measure. Costs and prices will automatically convert between units of measure.

A flexible pricing matrix allows for unlimited pricing options by customer and product.

Unlimited free form textual information may be entered for each item.

Items may be categorized in many ways, including unlimited custom codes you can define and maintain.

Automatically adjust your minimum, maximum, and re-order levels based upon usage history and desired turnover.

Usage tracking by item continually updates your sales analysis and profitability reports.

REPORTING

A flexible, easy to "setup and save" report writer allows you to create a virtually unlimited variety of reports such as detailed transaction registers, inventory valuation, product status, price lists or usage history.

Audit trails of changes to inventory files are automatically maintained and reports can be created which include the user's ID, date/time, reference number, quantities, and general ledger accounts affected.

Track and report inventory transfers and quantity in transit.

A "snapshot" of inventory at each month end is maintained in inventory history files and is available for reports.

STATUS INQUIRIES

Quickly and easily view the status of a particular item. Information displayed includes sales history, quantity on order, in inventory, open job orders or open sales orders, prices, costs and locations.

Inventory managers can rapidly get answers to inventory questions through the flexible, easy to use "usage inquiry." Search for items by various criteria such as serial number, customer name, original PO number or invoice.

Historical data available for inquiry or reports such as sales order detail and inventory activity may be kept for as long as desired.

Interfaces

- Accounts Receivable
- Purchase Order
- Sales Order / Job Order
- Kit Processing / Bill of Materials
- Accounting (General Ledger)
